

# ASAO Conference 2024 Notes

## Water

- **What is the experience of shows around the country re testing water before events, is this annually, quarterly or pre event around the show / showground? And does their water authority complete this or is an external body used?**
- Depends on your local authority massively, can be an additional cost if fails and retesting needed.
- Most shows do water testing but not all, some only flush through the system prior to the show. Shows on a borehole as being asked to test very regularly
- One show had a permanent showground but they have their own borehole, they are required to test their own water with their own kit before every event.
- Another delegate said that Mains water on their Showground must be tested before the show, by the local water authority.
- Another show had installed a new automatic testing system which is linked to their phones, they have been lucky to be able to get a grant for this £45,000.00 it also provides live data for wind/gusts etc
-
